To whom it may concern,

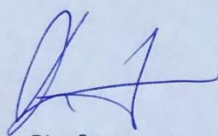

We hereby confirm that the following EVBox Elvi (both the cable and the socket version) firmware releases:

**G4 P0417 BE417 v11 and G4 P0421 BE421 v0**

are identical in every aspect (except the reported firmware version value).

The difference in naming is a consequence of internal firmware naming policy, whereby versions with vX suffix (with X being non-zero) are intended for internal development and testing, and versions with v0 suffix are publicly released versions. Therefore, we request to include the latter on the OCPP1.6 certificate.

Kind regards,

Dino Sepac
